CONTENTS

Volume 45, Issue Nos. 1–12 (2004)

International Journal for
NUMERICAL METHODS IN FLUIDS

Issue No. 1, 10 May

A projection scheme for incompressible multiphase flow using adaptive Eulerian grid: T. Chen, P. D. Minev and K. Nandakumar 1

Numerical approximation of optimal control of unsteady flows using SQP and time decomposition: S. S. Ravindran 21

On the application of slip boundary condition on curved boundaries: M. Behr 43

A projection method for solving incompressible viscous flows on domains with moving boundaries: H. Pan, L. S. Pan, D. Xu, T. Y. Ng and G. R. Liu 53

Improvements in the reliability and quality of unstructured hybrid mesh generation: Y. Ito and K. Nakahashi 79

Numerical simulations of large falling drops: L. Gottesdiener, D. Gueyffier, M. Abdelouahab, R. Gatignol and S. Zaleski 109

Issue No. 2, 20 May

Improving simple explicit methods for unsteady open channel and river flow: J. Burguete and P. García-Navarro 125

An accurate moving grid Eulerian Lagrangian localized adjoint method for solving the one-dimensional variable-coefficient ADE: A. Younes 157

Mesh adaptation as a tool for certified computational aerodynamics: E. Schall, D. Leservoisier, A. Dervieux and B. Koobus 179

Implicit WENO shock capturing scheme for unsteady flows. Application to one-dimensional Euler equations: A. Cadiou and C. Tenaud 197

Issue No. 3, 30 May

Simulation of two-dimensional turbulent flows in a rotating annulus: B. D. Storey 231

A 2D implicit time-marching algorithm for shallow water models based on the generalized wave continuity equation: K. M. Dresback, R. L. Kolar and J. C. Dietrich 253

Assessment of two-equation turbulence modelling for high Reynolds number hydrofoil flows: N. Mulvany, J. Y. Tu, L. Chen and B. Anderson 275

Static wetting on flexible substrates: a finite element formulation: S. Madasu and R. A. Cairncross 301

A non-linear dynamical system approach to finite amplitude Taylor-Vortex flow of shear-thinning fluids: Z. Li and R. E. Khayat 321

Issue No. 4, 10 June

Automatic unstructured surface mesh generation for complex configurations: U. Tremel, F. Deister, O. Hassan and N. P. Weatherill 341

Stability and accuracy of a semi-implicit Godunov scheme for mass transport: S. F. Bradford 365

Influence of inertia, topography and gravity on transient axisymmetric thin-film flow: R. E. Khayat, K.-T. Kim and S. Delosquer 391

Simulation of sharp gas-liquid interface using VOF method and adaptive grid local refinement around the interface: A. Theodorakakos and G. Bergeles 421

An aeroacoustic hybrid approach for non-isothermal flows at low Mach number: F. Golanski, C. Prax, E. Lamballais, V. Fortuné and J.-C. Valiére 441

Issue No. 5, 20 June

A boundary-domain integral equation method in viscous fluid flow: X.-W. Gao 463

Finite-volume-type VOF method on dynamically adaptive quadtree grids: J. P. Wang, A. G. L. Borthwick and R. Eatock Taylor 485

Linearized rational approximation method for solving non-linear Burgers' equation: Y. Wu and X. Wu 509

A non-linear coupled fluid-structure aeroelastic analysis of a slender bridge deck: A. V. Lopes, A. Cunha and L. M. C. Simões 527

The robustness issue on multigrid schemes applied to the Navier–Stokes equations for laminar and turbulent, incompressible and compressible flows: M. Vázquez, M. Ravachol, F. Chalot and M. Mallet 555

Issue No. 6, 30 June

3D two phase flows numerical simulations by SL-VOF method: B. Biausser, S. Guignard, R. Marcer and P. Fraunié 581

A triangular spectral/*hp* discontinuous Galerkin method for modelling 2D shallow water equations: C. Eskilsson and S. J. Sherwin 605

A compact numerical algorithm for solving the time-dependent mild slope equation: P. Lin 625

Boundary-fitted non-linear dispersive wave model for regions of arbitrary geometry: S. Beji and B. Barlas 643

A combined analytical-numerical method for treating corner singularities in viscous flow predictions: J.-M. Shi, M. Breuer and F. Durst 659

Issue No. 7, 10 July

Similarities between the quasi-bubble and the generalized wave continuity equation solutions to the shallow water equations: J. H. Atkinson, J. J. Westerink and J. M. Hervouet 689

Two-dimensional dispersion analyses of finite element approximations to the shallow water equations: J. H. Atkinson, J. J. Westerink and R. A. Luettich Jr. 715

Linear and non-linear stability analysis for finite difference discretizations of high-order Boussinesq equations: D. R. Fuhrman, H. B. Bingham, P. A. Madsen and P. G. Thomsen 751

A virtual boundary method with improved computational efficiency using a multi-grid method: J. Revstedt 775

Issue No. 8, 20 July

A convection-diffusion CFD model for aeolian particle transport: S. B. Ji, A. G. Gerber and A. C. M. Sousa 797

Evaluation of discontinuous Galerkin and spectral volume methods for scalar and system conservation laws on unstructured grids: Y. Sun and Z. J. Wang 819

Generalized Fourier analyses of the advection-diffusion equation – Part I: one-dimensional domains: M. A. Christon, M. J. Martinez and T. E. Voth 839

Generalized Fourier analyses of the advection-diffusion equation – Part II: two-dimensional domains: T. E. Voth, M. J. Martinez and M. A. Christon 889

Issue No. 9, 30 July

Numerical analysis of moving interfaces using a level set method coupled with adaptive mesh refinement: H. Kohno and T. Tanahashi 921

Consistent hybrid finite volume/element formulations: model and complex viscoelastic flows: M. S. Chandio, K. S. Sujatha and M. F. Webster 945

An unsteady multiblock multigrid scheme for lifting forward flight rotor simulation: C. B. Allen 973

Cubic eddy-viscosity turbulence models for strongly swirling confined flows with variable density: X. Yang and H. Ma 985

Modelling of a single drop impact onto liquid film using particle method: H. Xie, S. Koshizuka and Y. Oka 1009

Evaluation of an energy relaxation method for the simulation of unsteady, viscous, real gas flows: E. Bongiovanni, A. Ern and N. Glinsky-Olivier 1025

Issue No. 10, 10 August

Zero mass error using unsteady wetting-drying conditions in shallow flows over dry irregular topography: P. Brufau, P. García-Navarro and M. E. Vázquez-Cendón 1047

On the discontinuous Galerkin method for the numerical solution of the Navier–Stokes equations: V. Dolejší 1083

Adaptive mesh refinement and coarsening for aerodynamic flow simulations: L. C. Scalabrin and J. L. F. Azevedo 1109

Parallel-in-time simulation of the unsteady Navier–Stokes equaitons for incompressible flow: J. M. F. Trindade and J. C. F. Pereira 1125

Simulation of single- and two-phase flows on sliding unstructured meshes using finite volume method: B. Basara, A. Alajbegovic and D. Beader 1139

Issue No. 11, 20 August

Efficient and accurate time adaptive multigrid simulations of droplet spreading: P. H. Gaskell, P. K. Jimack, M. Sellier and H. M. Thompson 1161

High-order accurate numerical solutions of incompressible flows with the artificial compressibility method: J. A. Ekaterinaris 1187

Development of a convection–diffusion-reaction magnetohydrodynamic solver on non-staggered grids: T. W. H. Sheu and R. K. Lin 1209

A coordinate system independent streamwise upwind method for fluid flow computation: J. H. Ferziger and Y. Tseng 1235

Pressure correction methods based on Krylov subspace conception for solving incompressible Navier–Stokes problems: W. Liu, M. Ashworth and D. Emerson 1249

Issue No. 12, 30 August

A numerical-variational procedure for laminar flow in curved square ducts: P. M. Hatzikonstantinou and V. D. Sakalis 1269

Prediction of unsteady, separated boundary layer over a blunt body for laminar, turbulent, and transitional flow: D. S. Holloway, D. K. Walters and J. H. Leylek 1291

Large eddy simulation of turbulent concentric annular channel flows: N.-S. Liu and X.-Y. Lu 1317

Robust handling of non-linear constraints for GA optimization of aerodynamic shapes: S. Peigin and B. Epstein 1339
